

Markus Walker

Enterprise AI Engineering and Delivery | Secure AI

Brisbane, Queensland | markus@markuswalker.com | +61 439 802 060

markuswalker.com | linkedin.com/in/markus-walker-au

Security clearance: Current AGSVA Baseline; eligible for NV1 and NV2.

Professional Summary

Engineer focused on enterprise AI solutions, generative AI and agentic workflow automation, backed by more than seven years of technical delivery across IT and operational technology (OT). Combines hands-on AI development with Secure AI consulting, cloud infrastructure, knowledge engineering and technical enablement. Brings experience across distributed energy and resources environments where reliability, access control and service continuity are essential.

Technical Skills

AI engineering and automation: Generative AI, large language models (LLMs), AI agents, agentic workflows, prompt engineering, Python, PowerShell, Model Context Protocol (MCP), custom plugins and n8n. Practical work with Claude, Codex and ChatGPT.

Secure AI and cyber security: AI threat modelling, secure software development lifecycle (SDLC), AI governance, security controls, cloud security, identity and access management, and incident response planning.

Knowledge engineering: Enterprise knowledge bases, ontology design, structured content, ingestion and retrieval, source provenance and validation.

Cloud and enterprise platforms: AWS architecture, Oracle Cloud Infrastructure, Microsoft 365, Entra ID, Intune, Windows Autopilot, SCCM and GitHub Enterprise.

Consulting and technical enablement: AI use-case assessment, solution architecture assessment, client workshops, technical guidance, white papers, stakeholder engagement and operational handover.

IT and OT operations: Field engineering, enterprise networking, remote connectivity, device lifecycle management, control-room support, site commissioning and change control.

Professional Experience

Senior Engineer, Secure AI

CyberCX, part of Accenture | Jun 2026 to present

- Developed custom AI plugins and reusable agentic workflows, including versioned packaging and distribution through a GitHub Enterprise marketplace.
- Contributed across Secure AI consulting engagements and client workshops, assessing AI use cases, solution architecture, MCP governance and security controls. Presented secure SDLC guidance and recommendations to support implementation planning.
- Authored and maintained technical guidance for enterprise AI adoption, covering deployment options, administrative controls, access boundaries and security configuration.
- Author of *Distinguishing AI-Driven Attacks from Human and Automated Activity*, published by CyberCX. Translated research into practical SOC guidance for detection, triage and response, addressing behavioural indicators, false positives and the limits of AI attribution.
- Built an organisational knowledge base as a wiki for people and AI agents, combining ontology design, structured content, ingestion and retrieval with source provenance and validation.
- Built AI-assisted document-generation workflows and a web presentation tool to support technical delivery and stakeholder communication, incorporating reusable skills, agents and review processes.

Independent AI Practice and Professional Development

2025 to 2026

- Undertook hands-on independent AI practice and AI security research alongside the Certificate IV in Cyber Security and cloud and generative AI certification preparation.
- Completed practical projects in AWS security architecture and incident response, Splunk log ingestion and reporting, and controlled Active Directory and web application security labs.

IT Field Engineer

Tata Consultancy Services | May 2019 to Aug 2025

Embedded contractor supporting IT and OT environments across Shell QGC and QCLNG upstream and midstream operations in Queensland.

- Delivered IT field engineering across 20+ remote operational sites, including camps, plants and drilling environments, covering planned delivery, escalations and after-hours support.
- Maintained business-critical Microsoft 365, networking and telecom platforms, supporting control-room operations, field productivity and service continuity.
- Executed network transformation and wireless upgrades, including 300+ Cisco to Aruba access point replacements, live cutovers and stabilisation.
- Delivered Starlink connectivity for remote operations, contributing from project development through deployment. Supported fleet connectivity upgrades using Cisco rugged mobility routers and Cel-Fi.
- Managed client asset refresh projects across six annual cycles, deploying and validating enterprise devices under change control and security standards.
- Administered Entra ID identity and access management, including role-based access control and device compliance. Supported the move from SCCM-managed endpoints to Intune, Windows Autopilot and Azure AD Join.
- Coordinated vendors and site teams on telephony, AV and workplace technology rollouts, including Microsoft Teams Rooms and Cisco Unified Communications Manager.

Junior Network Engineer

Data#3 | Jan 2019 to May 2019

Contractor supporting the Shell QGC Enterprise Network Transformation project.

- Contributed field engineering and cutover coordination across operationally critical infrastructure, covering switching, routing, cabling and site delivery.
- Supported Cisco to Aruba network standardisation and vehicle connectivity upgrades across remote QGC sites.

Earlier Experience

QGC Contractor, Rotating Site Roles | MSS, ECM and Protech | 2012 to 2019

Worked across site security, operational support, administration, trades assistance, plant construction, commissioning and handover, developing detailed familiarity with QGC's operational environments.

Audio Engineer and Systems Technician | Airco Audio, USA | 2005 to 2012

Worked in live production environments involving networked control systems, cabling and real-time technical operations under operational pressure.

Selected Technical Work

Enterprise AI Agent Knowledge Base

Built an enterprise AI agent knowledge base to turn organisational knowledge and AI security frameworks into structured, traceable context for AI workflows. Used Open Knowledge Format (OKF) for linked standards, controls and cross-framework mappings, with custom agents and Python tooling for ingestion, retrieval, source provenance, citation checks and catalogue generation.

Education and Certifications

Certificate IV in Cyber Security (22603VIC) | TAFE Queensland | Mar 2026

Claude Certified Associate: Foundations | Anthropic

AWS Certified Solutions Architect, Associate | Amazon Web Services | 2025

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional | Oracle | Sep 2025

Oracle Cloud Infrastructure 2025 Certified Architect Associate | Oracle | Sep 2025

Oracle Cloud Infrastructure 2025 Certified Foundations Associate | Oracle | Sep 2025

Professional development: Preparing for Claude Certified Architect: Foundations.
